

Electrical Contractors Association of British Columbia

March 18, 2016

News Release:

ECABC & E2 Inc. Partnership Announced

The Electrical Contractors Association of BC is excited to announce it has formed an official partnership with E2 Inc., an industry-training provider that is a subsidiary of the Electrical Joint Training Committee (EJTC). E2 Inc. is a fee-for-service organization whose purpose is to bring the expertise and capacity of the EJTC to the industry training field. Training offered through E2 Inc. will be available to both union and open shop tradespeople via onsite training at EJTC's new training facility, offsite training at a location of the organizer's choice, or in some cases through a train-the-trainer capacity.

In order to provide training solutions relevant for ECABC, E2 Inc. is committed to building and maintaining an industry partnership with our association. Through this relationship, E2 Inc. seeks to achieve the following outcomes:

- Receive detailed information about the ongoing training needs of ECABC member contractors
- Collect feedback from ECABC about the relevance and value of E2 Inc.'s training program offerings
- Coordinate information outreach about available education programs
- Provide ECABC members with competitive training rates

Due to the constantly changing nature of today's construction landscape, training that produces measureable productivity and safety outcomes has never been more necessary. Whether it is advances in new technology, training for the "green economy", the up-skilling of new workers, or support for best industry practices, E2 Inc. is working closely with ECABC to ensure maximum return on industry's investment in training.
